## CHALLENGE CARD

---

### Power of Six

#### Equipment

No equipment needs to be provided for this challenge. However, if the challenge is done outside, it would be nice to have trees, bushes, rocks, playground equipment, fences, etc. in the area so teams can use them in their statues.

#### Starting Position

This challenge can be done outside. The teams should scatter around the work area. This challenge can be done on the playground or in a wooded area.

#### Our Challenge

The teams make a balance statue and must be connected when the statue is finished. The teams must use some object in the immediate school vicinity in their statue. Only 12 body parts may touch the ground when the statue is finished. The teams must also attempt to make a statue with 11 total body

parts and then a statue with 10 body parts touching the ground.

#### Rules and Sacrifices

1. Only the required number of body parts can touch the ground.
2. If the statue (team) loses its balance and becomes disconnected, the team must start over.
3. The object chosen by the team to be part of their statue must be approved by the instructor.
4. Group members cannot use last names or put-downs.
5. The team members must stay connected while they flow from one balance to another.
6. Team members may not get on another team members shoulders or use any other unsafe methods to build their statue.
